DESCRIPTORS: Swine, *Influenza viruses, *Tissue culture, Embryos, Cattle, Kidneys, Culture media.

Swine influenza virus can proliferate in a tissue culture of cattle embryonic kidney, which is equal in its sensitivity to this virus to chick embryos. The presence of swine influenza virus in a tissue culture may be determined by its cytopathogenic action, by hemagglutination, or by hemadsorption. The most sensitive method of indication of virus in tissue culture is the hemadsorption reaction. (Author)
